

# Street trees in Canberra

Compiled by  
Audrey H. Edwards

This book was published by ANU Press between 1965–1991.

This republication is part of the digitisation project being carried out by Scholarly Information Services/Library and ANU Press.

This project aims to make past scholarly works published by The Australian National University available to a global audience under its open-access policy.

The cover features several dark grey silhouettes of different tree leaves. In the top left, there is a large, rounded leaf with a serrated edge. Below it is a smaller, more complex leaf with multiple lobes. To the right of these are two more leaves: one with a serrated edge and a pointed tip, and another that is smooth-edged and oval-shaped. At the bottom, a long, narrow leaf with a serrated edge and a long petiole extends across the width of the cover.

## Foreword

This Canberra Companion will be of value to all those who take an interest in trees planted in Canberra. It will appeal to residents wanting to know more about street tree plantings in their city and visitors who come to see and enjoy the attractions of the National Capital, which undoubtedly include the many avenues of street trees. The author has carefully compiled the street tree lists from planting data provided by City Parks Branch of the Department of the Capital Territory and from the last published (1968) street tree plantings in *Trees in Canberra* by L. D. Pryor. The listings include for the first time many plantings made over the last decade in the newer parts of Canberra such as Belconnen, Tuggeranong, Weston Creek and parts of Woden, as well as plantings currently planned.

It is of interest that the early settlers on the Canberra plain made the first introductions of many exotic trees including elms, oaks, willows, poplars, hawthorns and conifers. Some, particularly the oaks, must have arrived as potted plants. From these plantings last century the early city planners were able to gauge the ability of exotics to survive in the local environment. Trial plantings have continued ever since. Promising species have been introduced into the street planting program continuously and whilst mostly exotics were used until relatively recently Australian species now constitute a significant portion of the species planted.

This text, it is hoped, will in no small way further the interest of the public in the use of trees in the urban environment.

J. C. G. Banks  
Lecturer in Dendrology and  
Forest Ecology, A.N.U.

## Preface

This book has been compiled for the use of the home gardener who might like to know the names of the trees in his own, or other streets in Canberra. Botanical names and equivalent common names have been given in the index—the botanical names are those commonly in horticultural use. No attempt has been made to refine these in the precise scientific sense, which would be a mammoth task. There should be few uncertainties, if any, as to which plant is meant by the names although some of these may be synonyms of the valid name in the precise technical sense. Where possible updates have been made, otherwise the naming is as in Rehder, *Manual of Cultivated Trees and Shrubs*.

The basic materials have been *Canberra Street Tree Index, June 1977*, published by the Department of the Capital Territory, updated and enlarged with the help and encouragement of members of the Landscape Division of the Department of the Capital Territory, who provided maps and plans of works carried out, and planned, for the newer suburbs. Some problems may arise in the listings given for the older suburbs since the original lists covered the entire length of the streets, irrespective of suburb—indeed the suburbs were not shown—so that here the entire list has been set out in each suburb concerned with a footnote to warn that not all trees shown may appear in that portion of the street.

A word of warning. We understand there have been occasions when the full quota of a particular tree was not available at the time of planting and it is possible there will be some slight deviations from those listed. It is also not unknown for residents, or even groups of residents, to take a dislike to the trees planted and to replace them with others of their own choice, once again causing deviations from the list given.

Our special thanks go to the Landscape Division of the Department of the Capital Territory generally, and to Ms Janice Stanford in particular, for her understanding and

sympathetic help concerning the newer areas of Canberra. We owe thanks also to Professor Lindsay Pryor, whose comments and assistance, especially concerning the older areas and with botanical names, were most valuable, and Dr J. C. G. Banks, who kindly supplied the photographs. Full responsibility for the final outcome rests, however, with this compiler.

Canberra 1978

72 *Sequoia giganteum*

## Street trees in Canberra

Canberra is noted for its beautiful trees, both native and exotic. This book will enable those who would like to identify them—gardeners who would like to grow them and those who just want to know—to identify the trees. Both botanical and common names are given in the index and each street in each suburb is listed in alphabetical order.

- *Canberra Companions* are published by the Australian National University Press as a contribution to the cultural, educational and recreational life of the immediate area served by the University. Titles available or in preparation include:

*Rambles around Canberra* edited by Allan J.

Mortlock and Gillian O'Loghlin

*Tales and Legends of Canberra Pioneers* by Samuel Shumack

*Episodes of Old Canberra* by Ged Martin

*Undiscovered Canberra* by Allan J. Mortlock and Bernice Anderson

*The Australian National University—People and places in a landscape*

*Canberra's Embassies* by Graeme Barrow

*Fishing around the Monaro* by Douglas Stewart

*The Canberra Handbook*
